

## WEBINARS

# Journal club: Mosaic mutations in autism

BY CLAIRE CAMERON

13 SEPTEMBER 2017

This *Spectrum* journal club will focus on two papers published this year that explore the role of mosaic mutations in autism.

Rebecca Barnard, a postdoctoral researcher in **Brian O’Roak’s** lab at Oregon Health and Science University, will describe results from their paper “**Exonic mosaic mutations contribute risk for autism spectrum disorder.**”

Elaine Lim, a postdoctoral fellow in **Christopher Walsh’s** lab at Harvard Medical School, will present findings from their paper “**Rates, distribution and implications of postzygotic mosaic mutations in autism spectrum disorder.**”

These presentations will be followed by a discussion session. We invite readers to submit questions for the presenters before and during the webinar.
